

SS2: Robots in Society: Challenges of Human-Robot Coexistence

Organizer

Etsuko Kobayashi The University of Tokyo

Kenta Kuwana, Tokyo Denki University

Description

Goal 3 of the JST Moonshot Project aims to develop AI robots by 2050 that will accompany humans throughout their lives, growing together with them. The deployment of research outcomes into society presents challenges that are not only technical but also require ensuring social and cultural acceptance. This organized session will present and discuss the efforts of this project, particularly focusing on real-world examples of social implementation and the research findings related to the necessary technology, ethics, and standardization.
